                                                                                                    9
                                                                                       9
The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBF3). OBF3 is also known as SOB1. The transgenic plant cell and OBF3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBF3 DNA.

                                                                                                               ö
             or
which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower colour fruit colour in plants. The present sequence represents the plasmid pAG3202 which is used in an example from the present invention for the generation of plants with an ANTI phenotype by transformation with an activation tagging construct

                                                                                                                                                                                                                                                                                                                                                                                                                                 7498
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises a plant gene activation vector that contains a hairy-root induction gene and enhancer and/or promoter which can function in a plant. The vector of the invention is useful for analyzing a plant gene. The present DNA sequence is claimed in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activation vector-related DNA sequence pHR-AT-GFP - SEQ ID 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel plant gene active vector comprising hairy-root induction gene, and enhancer and/or promoter that functions in plant, useful for activating plant gene forming hairy root.

The present sequence is that of a 4X cauliflower mosaic virus (CaMV) 35S enhancer sequence preferred for use in the method of the invention. It includes 4 repeats of 202 bp AluI-BcokV fragments of the 35S enhancer, 129 bp of the CaMV sequence associated with each tandem Alu-BcokV repeat, and an additional 7 bp repeated sequence, which does not appear in the 35S enhancer region of the native CaMV genome. This 4X CaMV 35S enhancer clement can be used in a method for identifying genes associated with a desired trait in a fruit-bearing plant. The method involves: transforming plant cells with an activation tagging vector comprising an element which functions to enhance gene expression and has the ability to integrate into the plant genome in a manner effective to enhance expression of cative plant genes, selecting transformed plant cells, regenerating transformed plant cells to yield mature plants, selecting plants having a contribution of which has been enhanced, and confirming the contribution of the modified expression of each identified gene to the desired trait.

The desired trait may be increased resistance to fungal, bacterial or viral pathogens, insects, modifications in flower size, flower number, clower plants characteristics or increased resistantion of leaves and shape, modified seed number, pattern or distribution of leaves and clower plants characteristics or increased drought, salt and antibiotic conference. Plants having short life cycles are transformed, as
                                                                                                                                                                                                                                                        enhancer"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09
                                                                                                                                                                                                                                                                                                                                                      transgenic plant cell, useful in producing plants with altered size stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GTTGGAAACTTTTTTGTGTGTTCATTGAATAATCATCGAATTCTCAATTTCTTGGAGACC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 uncleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                909
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                    size
                                                                                                                                                                                                   The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121 ACAAAAAGAAATAAAGAGCCTAAGAGAATGATGAAAATTGAAAGAGAAAAAAGAGCATTG

cell, useful in producing plants with altered size normal and healthy root growth. The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA. 301 GCTCAGCAATTCCCTTTCTTGATCAACACTACCGGATTGGTGCAATCTTCAAACGCGTTA 4616 GATTACAATTCAAGCAACACTGGATTAGATTTTGGTGGAACTCAAATAAGCAACATGATA 4676 AGTCCTATGAGTTCTAGTCGTCGGGATCTTGGATGCATGGGAGAATACCTCCATCACAACAA 241 Acregraricactricracregerecenterrecarecarecacanacanacanacana GCTCAGCAATTCCCTTTCTTGATCAACACTACCGGATTGGTGCAATCTTCAAACGCGTTA TATCCATTACTAGAAGGTAAGGGAGGTGTTAATCAAGGTGATTCTCAACAGAAGAGTAGT 361 TATCCATTACTAGAAGGTAAGGAGGGAGTGTTAATCAAGGTGATTCTCAACAGAAGAAGGTAGT GATTATTCCAATCAGCTAATGTTTAAGCCCTTGATGGATTTTTTCTTCAGGCGGGGTTAGC GCCACGCAAACAAGAAATGTGAAGGCGGAAGAGAATGATCAGGATCGGGGTAGGGATGGG 4496 AGTACTTCATCACTTACTTCTCGCCCAAGTTACTCAAACCCTAGCAAGTTTCATAGCTAC GGTCAAATCCCGGGGTTTAATTCCAACTTGCCCATCTTGCCTCCTCTCCAAAGCCTTGGA 4436 AACAAGAAGCAAATCCAGATCGAAATCTACGGTCGTGGTCTCGACTGATAATACTACT Gaps ; 0 Length 684; Sequence 684 BP; 212 A; 145 C; 149 G; 178 T; 0 U; 0 Other; 0; Indels 9.0%; Score 684; DB 12; L 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, altered acid metabolism, altered acid metabolism, altered among altered plant, altered amino acid metabolism, altered ester metabolism, altered amino acid metabolism, altered ester metabolism, altered station, altered station, oxygenated terpene, or isoprenoid metabolism, altered statio, oxygenated terpene, or isoprenoid metabolism, altered station, hydrocarbon metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and gene bluffiling or sexual PCR procedures. The present nucleic acid represents a DNA sequence of the invention.
                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                                                                                                                                                                                                         Plant DNA sequence which confers altered metabolic characteristic #7187.
                                                                                                                                                                                                                                                                                                                                                                                                                                               quinone metabolism; disease resistance; gene shuffling; sexual PCR; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420
                                                                                                                                                                                                                                                                                                                        The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polymuclectides and polymeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polymucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully cledined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensitivity or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichome tevelopment; increased root growth; increased root hairs; altered seed development; increased root proliferation or cell differentiation; rapid development; altered cell proliferation or cell differentiation; rapid development; created nearure sensecence; increased necrosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed biochemistry; increase in root anthocyanins; increase in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences, useful in bioinformatic search
                                                                                                                   transgenic; plant; enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flower structure; stem bifurcation; branching pattern; apical dominance; trichome; stem morphology; root growth; root hair; seed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   J, Broun PE;

The invention relates to Arabidopsis thaliana nucleic acid sequences. The DNA sequences and the polypeptides they encode are useful for identifying Compositions that modulate the homologous or related genes, for producing compositions that modulate the expression or function of the polypeptides, for mapping functional compositions that modulate the physiological pathways, for genetic manipulation of cells, preferably plant cells, in screening assays (avarious plant strains to determine the strains that are capable of withstanding a particular disease or convironmental stress, for enhancing or inhibiting production of biosynthetic products in plants and to create genetically modified and transgenic organisms, such as plant cells and plants. Transgenic plants are useful for introducing or improving disease resistance and stress tolerance in plants, screening biologically active agents, such as coreening biologically active agents, such as coreening biologically active agents, such as Sequences ABX56649-ABX57647 represent Arabidopsis thaliana sequence data for this patent cid not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence data for thal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5105
                                                                                                                                                                                                                                                                                     Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
